

EnergyQuote Green Initiatives

We have recently established a **Green Steering Committee** to take responsibility for implementing carbon and sustainability initiatives into our everyday operational processes. Against a background of heightened environmental awareness worldwide we feel that it's important to put our expertise in the field of energy efficiency to good use and 'practice what we preach' to our clients on a daily basis. Some early initiatives have included a cycle to work scheme for staff and the introduction of a weekly environmental bulletin educating all staff on energy efficiency measures. We'll be providing an update on the committee's activities in this section every quarter.
